

Guided Warehouse Operations

Work Orders

Work Orders are used to specify the processing of equipment and other trackable Items through an election. Work Orders :

- State the type and quantity of assets required for a polling location
- Track the allocation of equipment to satisfy the requirements

- Track the location and status of the equipment as it is prepared, delivered, used and returned
- Allow users to deal with a collection of assets as one item, such as a voting device with its attached ballot box and inserted memory packs, thus reducing scanning effort.

Scanning a barcoded item immediately fetches the current work order for that item and presents its information on screen.

PollTag™

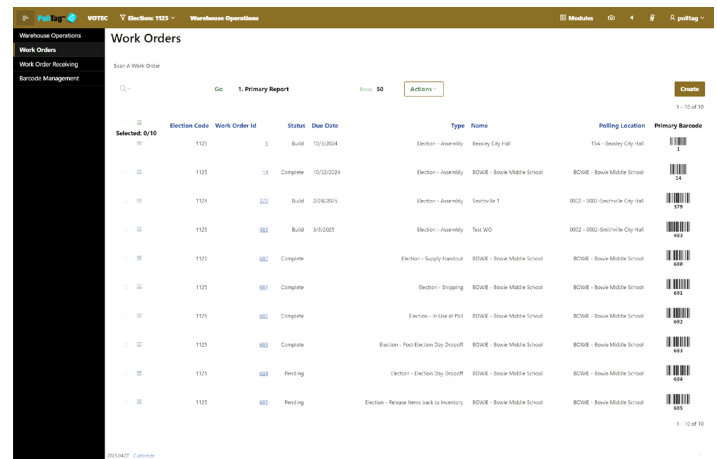

Election Asset Management System

PollTag understands both sealing equipment and equipment assembly/nesting requirements for assets. As a result, it is able to verify when a given piece of equipment is assembled and ready for use.

Work Flows

PollTag has defined a complete suite of pre-defined processes that can be customized for specific county needs:

- Assembly
- Supply Handout
- Shipping
- Election Day Return

- In Use at Poll
- Equipment Support / Replacement
- Post Election Day Return
- Release Items to Inventory/Quarantine
- Tabulation of Electronic Storage Media
